E.King Bombee

先不考虑X出现次数的奇偶问题 需要寻找的是从S到T的长度为K+1的不同路径数量 dp[i][j] 表示从S出发,通过**i**步走到**j**时不同路径数量 现在考虑X的数量: dp[i][j][e] e表示此时经过X的数量奇偶 可以得到递推公式:dp[i+1][t][x ^ (t == X)] += dp[i][f][x] 从0~k出发,通过每轮使用所有边更新状态,可以得到答案为dp[K][T][0]

```
using 11 = long long;
const int max n = 2e3+10;
const int mod = 998244353;
std::vector<std::pair<int,int>>edge;
int N,M,K,S,T,X;
int d1,d2;
//11 \text{ ans} = 0;
int main(){
    scanf(" %d %d %d %d %d %d",&N,&M,&K,&S,&T,&X);
    for(int i = 1; i <= M; i++){
        scanf(" %d %d",&d1,&d2);
            edge.push_back({d1,d2});
    }
    //
    std::vector dp(K+1,std::vector(N+1,std::array<11,2>{0,0}));
    dp[0][S][0] = 111;
    for(int i = 0; i < K; i++)
        for(auto [f,t] : edge)
            for(int x : \{0,1\}){
                 (dp[i+1][t][x ^ (t == X)] += dp[i][f][x]) \% = mod_;
                 (dp[i+1][f][x ^ (f == X)] += dp[i][t][x]) \% = mod_;
    printf("%11d\n",dp[K][T][0]);
    return 0;
}
```

F.Shortest Good Path

```
S串01表示顶点出现次数的奇偶,可以将此转换为整数存储 dis[i][j] 表示i整数对应S序列,路径最后为顶点i时的最短路径长 所以递推公式有 dis[p_s][eg] = dis[s][p] + 1 其中eg p 为联通点 p_s = (s ^ (1 << eg - 1))为最后加入eg点后,对应的S序列值
```

```
const int max_n = 20;
std::vector<int> edge[max_n];
std::deque<std::pair<int,int>> que;
int dis[1<<17][18];
int n,m;
long long ans = 0;
int main(){
    scanf(" %d %d",&n,&m);
    int f,t;
    for(int i = 1; i <= m; i++){
        scanf(" %d %d",&f,&t);
        edge[f].push_back(t);
        edge[t].push_back(f);
    }
    int N = 1 << n;
    for(int i = 1; i < N; i++)
        for(int j = 1; j <= n; j++)
            dis[i][j] = INT32_MAX;
    for(int i = 0; i < n; i++){
        dis[1<<i][i+1] = 1;
        que.push_back(\{1 << i, i+1\});
    }
    while(!que.empty()){
        int s = que.front().first, p = que.front().second;
        que.pop_front();
        for(auto eg : edge[p]){
            int p_s = s ^ (1<<(eg-1)); // 将eg加入后的S数值
            //已有,应为更小解
            if(dis[p_s][eg] < INT32_MAX)</pre>
                continue;
            dis[p_s][eg] = dis[s][p] + 1;
            que.push_back({p_s,eg});
        }
    }
    for(int i = 1; i < N; i++){
        int Val_s = INT32_MAX;
         for(int j = 1;j <= n;j++)
            Val_s = std::min(Val_s,dis[i][j]);
        ans += (long long)Val_s;
    printf("%lld\n",ans);
    return 0;
}
```
